

OUR FREE RANGE EGGS

- Our free range hens are kept under careful, loving supervision. At night they are housed inside a shed that is 100m long and 10m wide and during the day they are let out to roam freely. The hens have 2000sq meters of fenced outside area to roam in and 1000 square meters under roof. You have to fence in the birds and give them cover for their own protection.
- The hens have plenty of space to dust bath and chase insects outside.
- The houses are naturally ventilated and there are no lighting tricks that are used. A hen lays 1 egg a day.
- **The free range eggs comply with the strict guidelines as set out by the Code of Practices as stipulated by the South African Poultry Association. This code is in-line with the most stringent international free range regulations.**
- The hens are fed only natural ingredients that are of vegetable origin. So there are **NO** anti-biotics, **NO** animal protein, **NO** fishmeal and they are melamine free.
- If the hens are sick, they are taken out of the general population and given treatment. (it would be cruel not to help them). Once the treatment has passed through the bird, it is put back into the general population.
- There is no regulatory body governing free range farming methods so we have a letter from the vet and also the feed company stating that we conform to free range standards. We are also happy to take anyone to the farm to show them how happy our hens are.

Please do not hesitate to contact me if you have any questions regarding the eggs or the hens.

PROFILE FEEDS (Pty) Ltd QUALITY AND FEED SAFETY SYSTEM

This letter serves as confirmation that Profile Feeds (Pty) Ltd has a feed safety and quality control system in place. Our system covers the basic nutritional values of purchased raw materials as well as the safety of these products. We follow a hygiene program to mitigate and prevent/reduce the risk of Salmonella and other microbial contaminants. Routine samples are taken to test raw materials, feeds, water, equipment and storage facilities for Salmonella. Raw materials and feed are also tested for mycotoxins, pesticides and heavy metals.

Our procurement policy entails buying from reputable and trusted suppliers.

The accuracy of our ingredient declarations is important and we ensure that it remains credible at all times. Diets are scientifically formulated and may include:

- plant protein products
 - oils and fats
 - grain and grain by-products
 - vitamins and minerals
 - enzymes
 - pre and probiotics
 - genetically modified organisms (GMO's)
 - amino acids
- 

The below raw materials are not added to the diets:

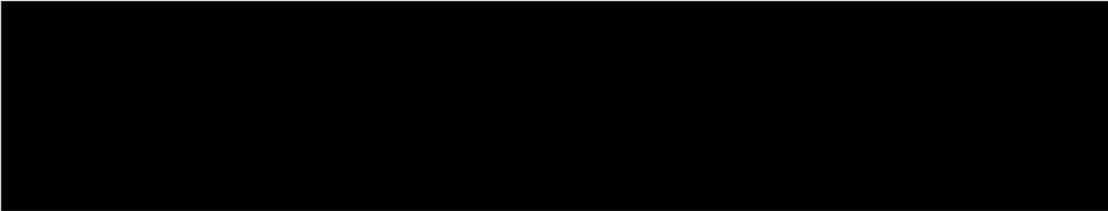

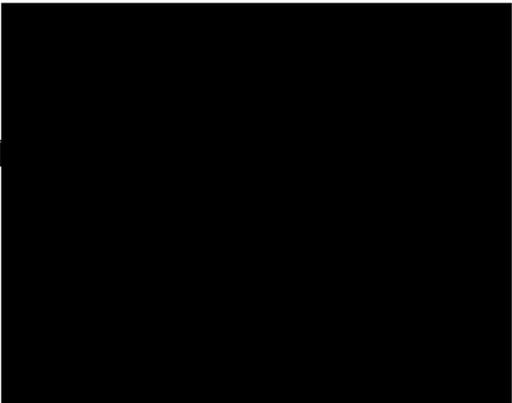

- Animal by-products or animal protein sources
- Fishmeal
- Routine antibiotics
- Growth promoters

Profile Feeds manufacture feed according to the AFMA code of conduct for the manufacturing of Safe Compound Animal Feedstuffs. Profile Feed complies with GMP's and all legal requirements as set out by the AFMA code of Conduct.

Annual audits are done by officials of Department of Agriculture, Forestry and Fisheries (DAFF) and biannual audits are done by AFMA.

Profile Feeds is committed to deliver safe and quality feed and welcomes any suggestions of how we can improve our system to suit the client's needs.

Please contact us should there be a need for additional information or assistance.

PRIVATE VETERINARY CONSULTANT

31-10-2019

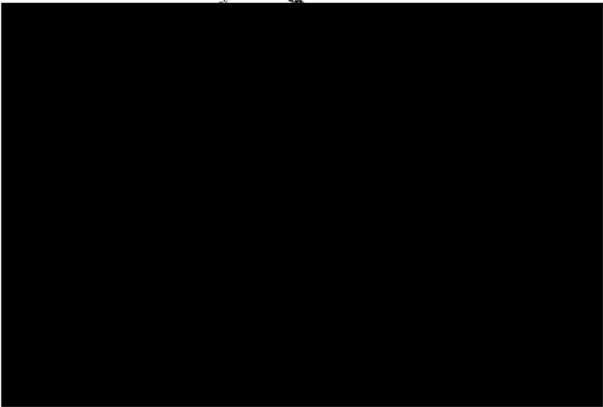

TO WHOM IT MAY CONCERN

This serves to confirm my professional veterinary services rendered to Barne Free Range in Hemel-and-Aarde, Hermanus.

All the layers on the farm are housed on the floor of the barn and have total freedom of access to feed, water and layer boxes.

In addition, their housing is so constructed to allow them to migrate freely to the outside into large open pens, weather permitting.

According to information provided by the manager, Mr Thys Visagie, together with my personal observations, the farm Barne Free Range produce all their eggs under free range conditions which comply fully with the terms and conditions as prescribed by the South African Poultry Association.

Re: Bidvest Catering Services request for information

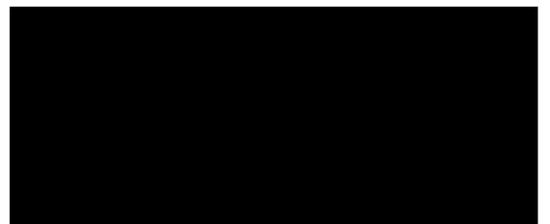

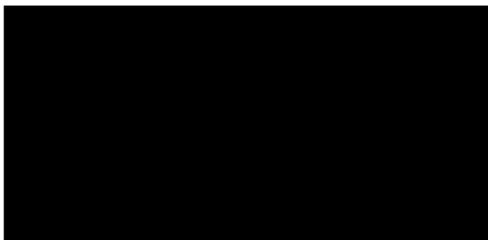

Your email dated 21 December 2022 has reference.

Dangeo Marketing cc t/a I Like Eggs, is a privately owned wholesale distribution business. We have been trading with Foodgistics for the past 10 years. Foodgistics is a distributor of our products and the eggs that we deliver to Foodgistics are the same eggs that Foodgistics will deliver to their customer.

In reference to the letter sent to you by Bidvest Catering Services, please see the below information pertaining to the poultry supplier supplying our free-range eggs to us.

- Farm Name:** Barne Farming Enterprises
- No of Hens:** 25 000 per annum on average
- No of Eggs:** 7,125,076 eggs per annum (including dirties, mediums, cracks)
- Stock Density:** Night time – 8.3 birds per square meter
Day Time – 2.7 birds per square meter
- Cages used:** THERE ARE NO CAGES AT ALL ON THE FARM. It is a free-range farm
- Culled Chickens:** Hens are culled when they reach between 80 weeks and 95 weeks of age. The Culls are sold to companies and private individuals and are collected directly from the farm. The birds are still alive when they leave the farm. The farm houses 3 different age groups of birds and these are culled on a rotational basis.
- Certification:** There is sadly no registered regulatory board who check on the farming practices in the Western Cape. We have attached a letter from the farms vet stating that the farm adheres to the free-range farming practices as stipulated by the South African Poultry Association. (we would be more than happy to arrange a farm visit for anyone from Foodgistics and Bidvest Catering Services to inspect the farm)

Bird Nutrition: Please see attached letter from the feed company.

Please do not hesitate to contact me if you have any questions pertaining to the above or would like More clarity on any points raised.
